Building Java Programs

A Back to Basics Approach

CHAPTER 3G

GRAPHICS

Please download the PPT, and use Slide Show for a better viewing experience

Winnie Li

Graphical objects

We will draw graphics in Java using 3 kinds of objects:

- DrawingPanel: A window on the screen.
 - O Not part of Java; provided by the authors. See class web site.

• Graphics: A "pen" to draw shapes and lines on a window.

• Color: Colors in which to draw shapes.

DrawingPanel

"Canvas" objects that represents windows/drawing surfaces

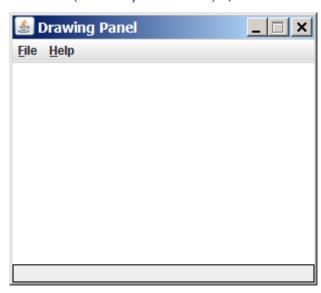

To create a window:

DrawingPanel name = new DrawingPanel(width, height);

Example:

DrawingPanel panel = new DrawingPanel (300, 200);

- The window has nothing on it.
 - O We draw shapes / lines on it with another object of type Graphics.

Graphics

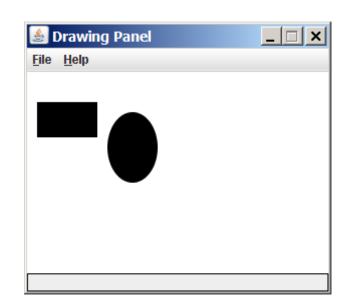

"Pen" or "paint brush" objects to draw lines and shapes

O Access it by calling getGraphics on your DrawingPanel.
Graphics g = panel.getGraphics();

 Draw shapes by calling methods on the Graphics object.

```
g.fillRect(10, 30, 60, 35);
g.fillOval(80, 40, 50, 70);
```

Java class libraries, import

- Java class libraries: Classes included with Java's JDK.
 - organized into groups named *packages*
 - O To use a package, put an *import declaration* in your program:

```
// put this at the very top of your program
import packageName.*;
```

Graphics belongs to a package named java.awt

```
import java.awt.*;
```

O To use Graphics, you must place the above line at the very top of your program, before the public class header.

Coordinate system

- Position (o, o) is at the window's top-left corner.
 - x increases rightward and the y increases <u>downward</u>.
- The rectangle from (0, 0) to (200, 100) looks like this:

Graphics methods

_			
 	 	CS	210
	,	33	

Method name	Description
g.drawLine(x1 , y1 , x2 , y2);	line between points (x1, y1), (x2, y2)
<pre>g.drawOval(x, y, width, height);</pre>	outline largest oval that fits in a box of size width * height with top-left at (x, y)
<pre>g.drawRect(x, y, width, height);</pre>	outline of rectangle of size width * height with top-left at (x, y)
g.drawString(text , x , y);	text with bottom-left at (x, y)
g.fillOval(x, y, width, height);	fill largest oval that fits in a box of size width * height with top-left at (x, y)
<pre>g.fillRect(x, y, width, height);</pre>	fill rectangle of size width * height with top-left at (x, y)
g.setColor(Color);	set Graphics to paint any following
Portions Copyright 2020 by Pearson Education	shapes in the given color

Color

Specified as predefined Color class constants:

Color.CONSTANT_NAME

BLACK, BLUE, CYAN, DARK_GRAY, GRAY, GREEN, LIGHT_GRAY, MAGENTA, ORANGE, PINK, RED, WHITE, YELLOW

Or create one using <u>Red-Green-Blue</u> (RGB) values of 0-255

```
Color name = new Color (red, green, blue);
```

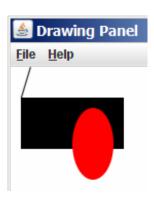

• Example:

```
Color brown = new Color(192, 128, 64);
List of RGB colors: <a href="http://web.njit.edu/~kevin/rgb.txt.html">http://web.njit.edu/~kevin/rgb.txt.html</a>
```

Using colors

- CS 210
- Pass a Color to Graphics object's setColor method
 - Subsequent shapes will be drawn in the new color.

```
g.setColor(Color.BLACK);
g.fillRect(10, 30, 100, 50);
g.drawLine(20, 0, 10, 30);
g.setColor(Color.RED);
g.fillOval(60, 40, 40, 70);
```

File Help

- Pass a color to DrawingPanel's setBackground

 ☐ Drawing Panel
 - method
 - The overall window background color will change.

```
Color brown = new Color(192, 128, 64);
panel.setBackground(brown);
```

Outlined shapes

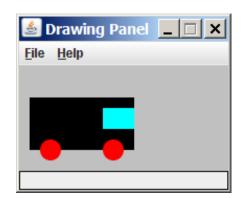

• To draw a colored shape with an outline, first *fill* it, then *draw* the same shape in the outline color.

```
import java.awt.*; // so I can use Graphics
public class OutlineExample {
    public static void main(String[] args) {
        DrawingPanel panel = new DrawingPanel (150, 70);
        Graphics g = panel.getGraphics();
        // inner red fill
        g.setColor(Color.RED);
                                              Drawing Pa... 🔲 🗆 🗙
        g.fillRect(20, 10, 100, 50);
                                             File Help
        // black outline
        g.setColor(Color.BLACK);
        g.drawRect(20, 10, 100, 50);
```

Superimposing shapes

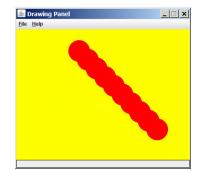

• When ≥ 2 shapes occupy the same pixels, the last drawn "wins."

```
import java.awt.*;
public class Car {
    public static void main(String[] args) {
        DrawingPanel panel = new DrawingPanel (200, 100);
        panel.setBackground(Color.LIGHT GRAY);
        Graphics g = panel.getGraphics();
        g.setColor(Color.BLACK);
        g.fillRect(10, 30, 100, 50);
        a.setColor(Color.RED);
        g.fillOval(20, 70, 20, 20);
        g.fillOval(80, 70, 20, 20);
        g.setColor(Color.CYAN);
        g.fillRect(80, 40, 30, 20);
```

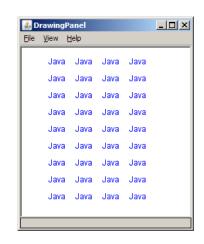

Drawing with loops

• The *x*,*y*,*w*,*h* expressions can use the loop counter variable:

• Nested loops can be used with graphics:

```
g.setColor(Color.BLUE);
for (int x = 1; x <= 4; x++) {
    for (int y = 1; y <= 9; y++) {
        g.drawString("Java", x * 40, y * 25);
    }
}</pre>
```

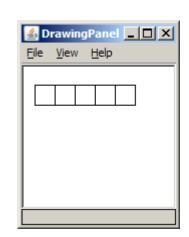

Zero-based loops

CS 210

Beginning at o and using < can make coordinates easier.</p>

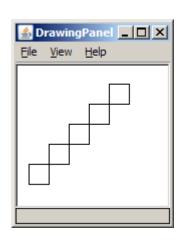

```
DrawingPanel panel = new DrawingPanel(150, 140);
Graphics g = panel.getGraphics();

// horizontal line of 5 20x20 rectangles starting
// at (11, 18); x increases by 20 each time
for (int i = 0; i < 5; i++) {
    g.drawRect(11 + 20 * i, 18, 20, 20);
}</pre>
```

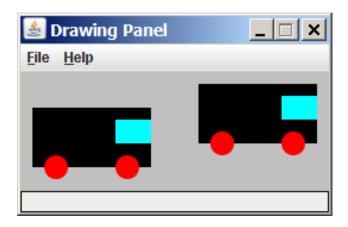

- Exercise: Write a variation of the above program that draws the output at right.
 - The bottom-left rectangle is at (11, 98).

```
for (int i = 0; i < 5; i++) {
    g.drawRect(11 + 20 * i, 98 - 20 * i, 20, 20);
}</pre>
```

Parameterized figures

- Modify the car-drawing method so that it can draw cars at different positions, as in the following image.
 - O Top-left corners: (10, 30), (150, 10)
 - O Increase the drawing panel's size to 260x100 to fit.

Drawing with parameters

- To draw in a method, you must pass the Graphics object to the method.
 - Otherwise, g is out of scope and cannot be used!
- syntax (declaration):

syntax (call):

```
<name>(g, <values>);
```

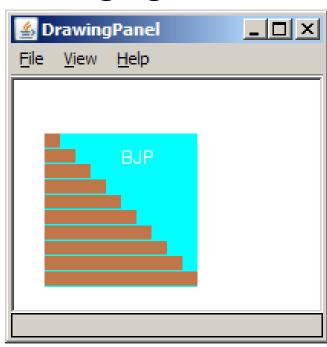

Parameterized answer

```
import java.awt.*;
public class Car3 {
    public static void main(String[] args) {
        DrawingPanel panel = new DrawingPanel(260, 100);
        panel.setBackground(Color.LIGHT GRAY);
        Graphics g = panel.getGraphics();
        drawCar(q, 10, 30);
        drawCar(g, 150, 10);
    public static void drawCar(Graphics g, int x, int y) {
        g.setColor(Color.BLACK);
        q.fillRect(x, y, 100, 50);
        g.setColor(Color.RED);
        g.fillOval(x + 10, y + 40, 20, 20);
        g.fillOval(x + 70, y + 40, 20, 20);
                                                     Drawing Panel
                                                     File Help
        g.setColor(Color.CYAN);
        g.fillRect(x + 70, y + 10, 30, 20);
```

Java book figure

- Write a program that draws the following figure:
 - odrawing panel is size 200x150
 - o book is at (20, 35), size 100x100
 - o cyan background
 - o white "BJP" text at position (70, 55)
 - o each stair is 9px tall
 - □ 1st stair is 10px wide
 - 2nd stair is 20px wide ...

- o stairs are in color (red=191, green=118, blue=73)
- stairs are 10px apart (1 blank pixel between)

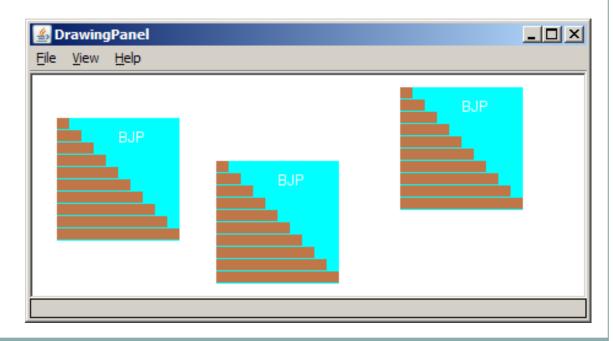

Java book solution

CS 210

```
// Draws a Building Java Programs/ textbook with DrawingPanel.
import java.awt.*;
public class Book {
    public static void main(String[] args) {
        DrawingPanel panel = new DrawingPanel(200, 150);
        panel.setBackground(Color.WHITE);
        Graphics q = panel.getGraphics();
        g.setColor(Color.CYAN);
                                           // cyan background
        g.fillRect(20, 35, 100, 100);
                                           // white "bjp"
        g.setColor(Color.WHITE);
  text
        g.drawString("BJP", 70, 55);
        g.setColor(new Color(191, 118, 73));
        for (int i = 0; i < 10; i++) { // orange "bricks"
            g.fillRect(20, 35 + 10 * i, 10 + 10 * i, 9);
```

Multiple Java books

- Modify the Java book program so that it can draw books at different positions as shown below.
 - o book top/left positions: (20, 35), (150, 70), (300, 10)
 - odrawing panel's new size: 450x180

Multiple books solution

CS 210

• To draw in a method, you must pass Graphics g to it.

```
// Draws many BJP textbooks using parameters.
import java.awt.*;
public class Book2 {
    public static void main(String[] args) {
        DrawingPanel panel = new DrawingPanel(450, 180);
        panel.setBackground(Color.WHITE);
        Graphics q = panel.getGraphics();
        // draw three books at different locations
        drawBook(g, 20, 35);
        drawBook(g, 150, 70);
        drawBook(q, 300, 10);
```

Multiple books, cont'd.

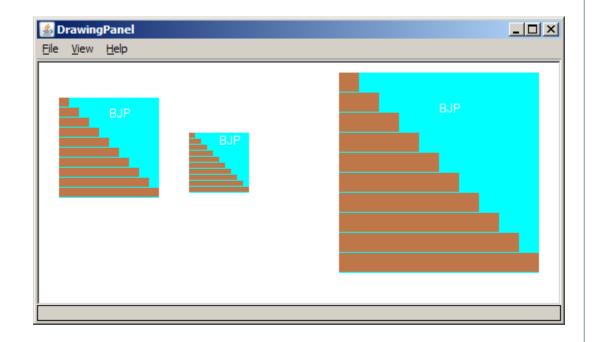

CS 210

• •

```
// Draws a BJP textbook at the given x/y position.
 public static void drawBook(Graphics g, int x, int y) {
                                         // cyan background
     g.setColor(Color.CYAN);
     g.fillRect(x, y, 100, 100);
                                         // white "bjp"
     g.setColor(Color.WHITE);
text
     g.drawString("BJP", x + 50, y + 20);
     g.setColor(new Color(191, 118, 73));
      for (int i = 0; i < 10; i++) { // orange "bricks"
          q.fillRect(x, y + 10 * i, 10 * (i + 1), 9);
```

Resizable Java books

- Modify the Java book program so that it can draw books at different *sizes* as shown below.
 - o book sizes: 100x100, 60x60, 200x200
 - odrawing panel's new size: 520x240

Resizable books solution

CS 210

```
// Draws many sized BJP textbooks using parameters.
import java.awt.*;
public class Book3 {
    public static void main(String[] args) {
        DrawingPanel panel = new DrawingPanel(520, 240);
        panel.setBackground(Color.WHITE);
        Graphics g = panel.getGraphics();
        // draw three books at different locations/sizes
        drawBook(g, 20, 35, 100);
        drawBook(q, 150, 70, 60);
        drawBook(g, 300, 10, 200);
```

Resizable solution, cont'd.

CS 210

. . .

```
// Draws a book of the given size at the given position.
 public static void drawBook(Graphics g, int x, int y, int size) {
                                         // cyan background
     g.setColor(Color.CYAN);
     g.fillRect(x, y, size, size);
     g.setColor(Color.WHITE);
                                         // white "bjp"
text
     g.drawString("BJP", x + size/2, y + size/5);
     g.setColor(new Color(191, 118, 73));
      for (int i = 0; i < 10; i++) { // orange "bricks"
          q.fillRect(x,
                     y + size/10 * i, // y
                    size/10 * (i + 1), // width
                     size/10 - 1);  // height
```

Objects that represent arbitrary shapes

- Add points to a Polygon using its addPoint(x, y) method.
- Example:

```
DrawingPanel p = new DrawingPanel(100, 100);
Graphics g = p.getGraphics();
g.setColor(Color.GREEN);

Polygon poly = new Polygon();
poly.addPoint(10, 90);
poly.addPoint(50, 10);
poly.addPoint(90, 90);
```

g.fillPolygon(poly);

DrawingPanel methods

- panel.clear();
 Erases any shapes that are drawn on the drawing panel.
- panel.setWidth(width);
 panel.setHeight(height);
 panel.setSize(width, height);
 Changes the drawing panel's size to the given value(s).
- panel.save (filename);
 Saves the image on the panel to the given file (String).
- panel.sleep (ms);
 Pauses the drawing for the given number of

Animation with sleep

- DrawingPanel's sleep method pauses your program for a given number of milliseconds.
- You can use sleep to create simple animations.

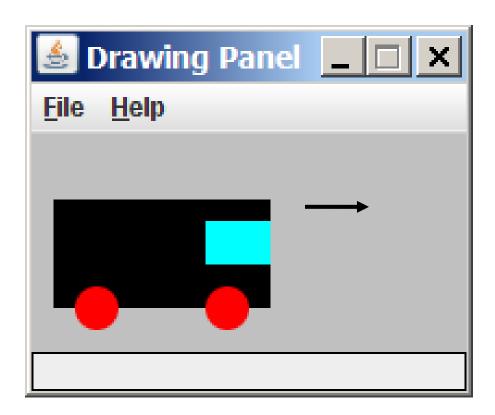

```
DrawingPanel panel = new DrawingPanel(250, 200);
Graphics g = panel.getGraphics();

g.setColor(Color.BLUE);
for (int i = 1; i <= 10; i++) {
    g.fillOval(15 * i, 15 * i, 30, 30);
    panel.sleep(500);
}</pre>
```

O Try adding sleep commands to loops in past exercises in this chapter and watch the panel draw itself piece by piece.

Animation exercise

• Modify the previous program to draw a "moving" animated car.

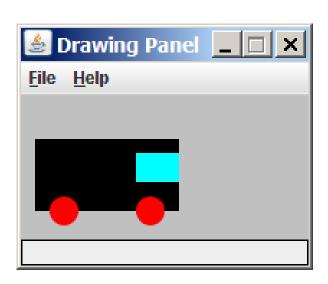

Animation exercise – Extra Credit

CS 210

• Modify the following program to draw a "moving" car.

```
import java.awt.*;
public class Car {
    public static void main(String[] args) {
        DrawingPanel panel = new DrawingPanel(200, 100);
        panel.setBackground(Color.LIGHT GRAY);
        Graphics g = panel.getGraphics();
        // car body
        g.setColor(Color.BLACK);
        g.fillRect(10, 30, 100, 50);
        // wheels
        q.setColor(Color.RED);
        g.fillOval(20, 70, 20, 20);
        g.fillOval(80, 70, 20, 20);
        // window
        g.setColor(Color.CYAN);
        g.fillRect(80, 40, 30, 20);
```

The End

CHAPTER 3G

GRAPHICS
